**EVALUATION OF EAR WAX SAMPLES FOR
PRESENCE OF BACTERIA, YEASTS OR MOLDS
for A.P. Enterprises**

Study number: 94-0004(APC)
Study Director: Steve R. Rachui, M.S.
Testing facility: Thomas J. Stephens & Associates, Inc.
3310 Keller Springs Rd., Ste. 130
Carrollton, TX 75006
Sponsor: A.P. Enterprises
12312 Cedar Bend Drive
Dallas, TX
Study conducted: 1-17-94 to 1-21-94

RESULTS OF ASSAY

<u>Sponsor's test material identification</u>	<u>S & A's test material identification</u>	<u>Presumptive identification</u>
B	0037-94L	no growth
E	003894L	no growth
C	0039-94L	no growth
B	0040-94L	Gram positive (+) and gram negative (-) rods
F	0041-94L	no growth
A	0042-94L	no growth
G	0043-94L	no growth

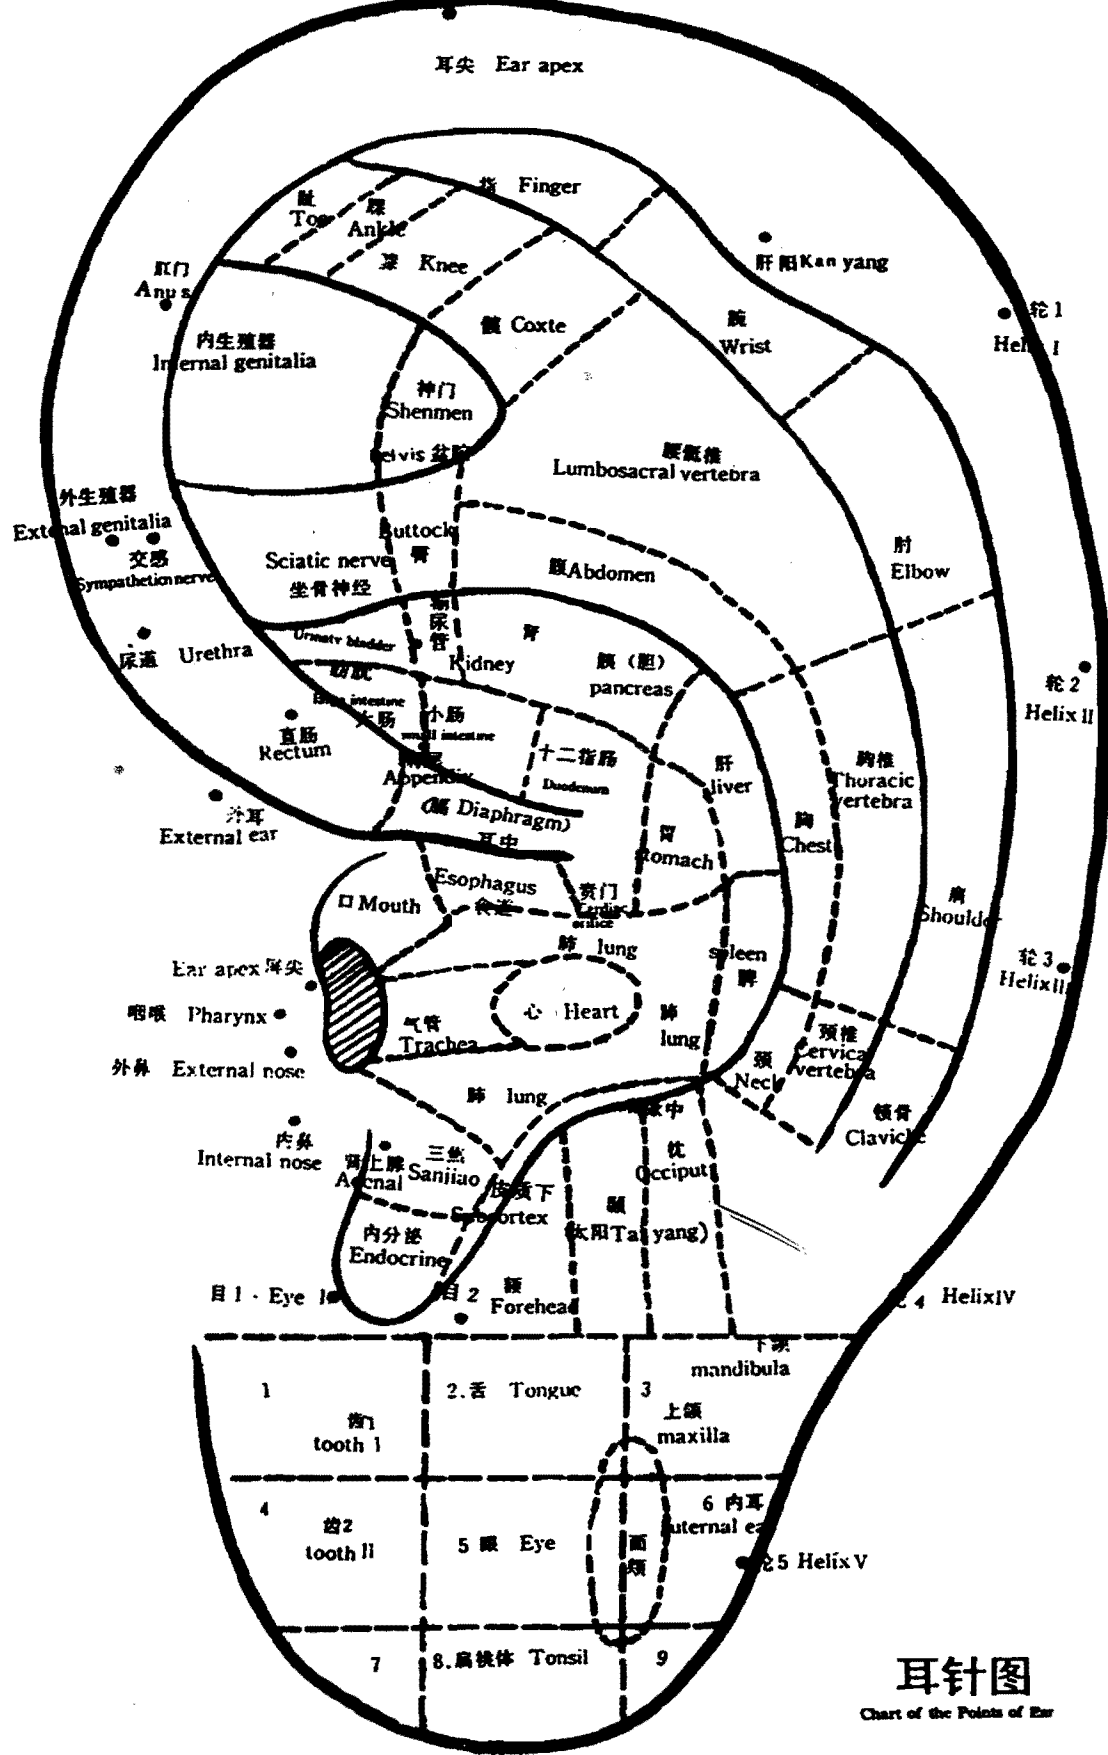

CONCLUSIONS

Bacterial growth was found in only one of the Sponsor's samples. Sample B (0040-94L) produced colonies on both TSA and SDA. Both plate types yielded identical colonies, so only the TSA growths were gram stained. Both gram positive (+) and gram negative (-) rods were identified. The remaining samples were incubated in TSB an additional 48 hours, but showed no growth.

The Ear's Acupuncture Points

Acupuncture points are richly represented in the nose as well as the ears.

If one uses ornaments and jewelry, for example, diamond earrings, the consequent continuous stimulation will cause imbalance in the energy system of the meridians, which will result in pain and sickness. It could take a couple of hours to a couple of years for symptoms to show. Many patients have gotten rid of eczema, headache, throat problems, stomach aches, etc. once they agreed to discontinue the use of earrings and allow holes in the ears to heal over.
